DEPARTMENT OF CSE

PROJECT ABSTRACT SUBMISSION

COURSE: CLOUD BASED DATA ANALYTICS SPECIALITY (23SDCS08R) **A.Y. 2025 - 2026**

TITLE OF THE PROJECT	Student Performance analytics Dashboard Azure Concepts and Power BI	
S. No.	**University ID**	**Name**
1	2320030053	Pawan Achyutanand
2	2320030011	PONNAM HARSHAVARDHAN
3	2320030481	K PRANAY
4	2320030175	PALADI ABHIDEEP

Abstract

The Student Performance Analytics Dashboard is a cloud-based data analytics solution designed to transform raw academic data into meaningful insights using Microsoft Azure SQL Database and Power BI. Educational institutions continuously generate large volumes of structured data, including student details, marks, and attendance records; however, traditional manual analysis methods are often inefficient, time-consuming, and prone to errors. This project addresses these challenges by storing data in a secure and scalable Azure SQL Database and applying analytical techniques through Power BI, where DAX (Data Analysis Expressions) is used to compute key performance indicators such as average marks, pass percentage, fail count, and performance trends. The system presents these insights through interactive dashboards that allow users to easily monitor student progress, compare subject-wise performance, and understand the impact of attendance on academic outcomes. By enabling real-time visualization and data-driven decision-making, the dashboard enhances the ability of educators to identify areas needing improvement and take timely actions. Furthermore, the solution is highly scalable and can be extended with features like real-time data updates, predictive analytics, and integration across multiple departments, making it a robust tool for modern educational analytics.
